

## DF200

## Precision screw and rivet dispenser

### Outline and feature

This is a feeder capable of accurately feeding precision screws with a rotation of a disc. Eliminates clogging of screws and prevents interruption of work.

- \* Can feed extremely small screws from 0.6 mm.
- \* Also adapted to screws of special shape such as thin-head screw, short-length screw, screw with washer, etc.
- \* Also available with clean room specifications.

### Main specifications

### Applications

- \* For feed of precision and extremely small screws and rivets.
- \* For feed of thin-head, short-length screws and screws with washer which were difficult to feed with conventional method.
