

Drive Units

RNA drive units offer reliability and endurance. The use of high performance magnets give a continuous high feed rate regardless of the number of parts in the bowl. RNA drive units are renowned for their durability, smooth feed characteristics and low noise levels.

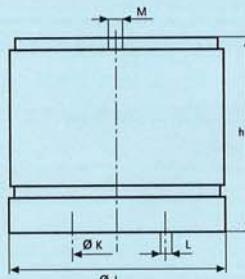

**SRC-N 63-2
SRC-N 100-2**

Electrical Equipment

Supply Voltage 200V 50 Hz

Protection class IP54

Output vibrating frequency:
-1=50 Hz/3000 min⁻¹
-2=100 Hz/6000 min⁻¹

**SRC-N 160-2
SRC-N 200-2
SRC-B 200-2**

Standard nominal tension 200 V/50 Hz. Also available in special nominal tensions 110 V/220 V and frequencies 50 Hz/60 Hz.

Drive Units

Application area for 50 Hz vibration frequency (-1 design)

- for heavy additional mass at the bowl (f.e. extensive orienting devices)
- for minor noise emission
- drive unit will be more damageable by heavy loading (filling weight) as by -2 design

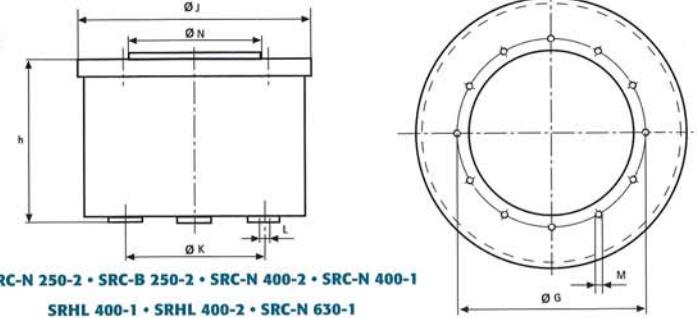

Application area for 100 Hz vibration frequency (-2 design)

- if "fine" orienting devices are needed for small sort criterions of the work pieces
- better for critical cutting site passage (small vibrating cast of the work pieces)

SRHL The bowl feeder type SRHL 400 is a very efficient drive unit and is recommended for use with heavy tooling and high feed requirements.

* Longer connection cables are available upon request • ** Extra springs for larger capacity

Standard paint finish: RAL 7035 • Special paint finish on request

SRC-N 800-1

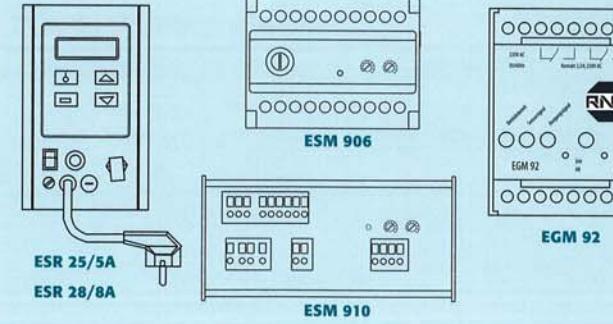

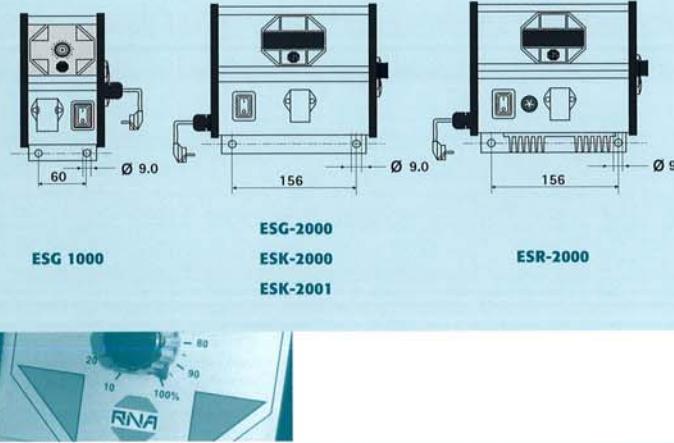

Please advise feed direction when ordering (see also page 5)
Subject to manufacturing tolerances.

Control Boxes

RNA provides state of the art controllers for all vibratory drive units. These range from low cost units to self calibrating, high-tech controllers using microprocessor technology to control external sensors and provide communication signals. These are specially designed to meet the requirements of the bowl feeder industry. All controllers are CE approved.

Control Boxes

Modular for integration in switch cabinets
